Information Security Officer

Officer Chuck Morse is an Information Technology Consultant specializing in the study of Computer Crime and examining Forensic Digital Evidence. He currently provides a wide range of technical support and services to multiple police agencies, law firms and companies with small to medium sized networks.

As a Computer Science major and Criminal Law and Investigations minor at Kentucky State University, Chuck's IT career actually started while still in school working computer related jobs during summer breaks. His 1<sup>st</sup> and 2<sup>nd</sup> college year summer internships were with a local pharmaceutical giant. He was responsible for building a database for their biochemical testing and validation laboratory of a well known blockbuster drug product. His 3<sup>rd</sup> college year summer break led to a summer job with a government computer agency working as a Junior Analyst in the mainframe data operations division. After college, he accepted a full time position with the government as an Analyst. For 2 years, this position confirmed the growing need for technology specialist in law enforcement while working with agencies like the Indianapolis Metro Police Department, the Marion County Sheriff's Department and the Marion County Justice Agency.

After multiple certifications, awards and many years of experience working with large government and private entities in the areas of computer hardware, software, voice and data technology, Chuck spends most of his time now investigating the impact of computer crimes to individuals and to businesses as well as utilizing emerging law enforcement technology to improve police operations.

Recently, Chuck received a National Criminal Justice Computer Forensics Certification. As a member of organizations designed to protect our nation's infrastructure, he's joined some of the top Computer Crime Investigators in the fight against cyber crimes.
